RESOLVED, that the program in Geoinformatics offered at Hunter College leading to the Master of Science, be approved, effective February 29, 2016, subject to financial ability.

EXPLANATION: Geoinformatics is the field of study that lies where Geographic Information Science and Computer Science intersect. There is a growing employment demand in for-profit, nonprofit and government organizations for individuals with strong geospatial technical and analytical skills. This program will meet that demand by focusing on computational methods for spatial-temporal analysis and big data analytics.
